Re: Rye Park Area Traffic Data
City of Rye, Westchester County, New York
MC Project No. 15001515B

Dear Mr. Serrano:

Maser Consulting, P.A. has compiled the initial data collection of traffic volumes, speeds, and vehicle classification for various key roadway links in the Rye Park neighborhood. The information was collected to identify representative summer time conditions and was collected generally between the period of July 19 through July 26, 2017. The information collected included traffic volumes, vehicle speeds, and vehicle classification all by direction on the links identified on Figure No. 1.

1. Existing Traffic Volumes (Figures No. 2, 3, and 4)
   The link traffic volumes for the weekday AM and PM peak hours, as well as Saturday hours, are summarized on Figures No. 2, 3, and 4 attached. Detailed hour by hour summaries of the data are contained in the Appendix. These are summarized on an hourly basis by direction.

2. Traffic Speeds (Table VS-1)
   Traffic speed data was also collected by direction for each of the roadway links. Table VS-1 provides a summary of the 85th percentile speeds observed on the various roadway links. As can be seen, 85th percentile speeds range from a low of 30 MPH on Evergreen Avenue to a high of 35 MPH on Hillside Road. Note that the individual link speeds by direction by time of day are shown on the detailed printouts in the Traffic Data Appendix.

3. Vehicle Classification Data
   For each of the roadway links the percentage of passenger vehicles and trucks were identified and they are also shown on the machine print out located in the Appendix. The data is also summarized in Table VS-1.

4. Intersection Turning Movement Traffic Counts
   In addition to the machine count data, peak hour traffic turning movement counts are being collected at each of the key intersections in the area, including the following:

   - High Street and Grandview Avenue
   - High Street and Evergreen Avenue
   - High Street and Ridge Street
   - Hillside Avenue and Boston Post Road
   - Hillside Avenue and Evergreen Avenue
   - Grandview Avenue and Cedar Street

   These counts will be collected during the weekday AM and PM peak hour and will be summarized to document the existing traffic patterns.

5. Additional Traffic and Speed Data
   The above referenced data was compiled to identify summer time conditions in an effort to isolate the effects of school traffic. Additional similar information is planned to be collected in September after schools are back in session and will include the turning movement counts, link volumes, link speeds, and vehicle classification to be used as a basis of the traffic calming and potential street closure analysis.

In the meantime, if you have any questions, please do not hesitate to contact us.

Very truly yours,

MASER CONSULTING P.A.

Philip J. Grealy, Ph.D., P.E.
Principal/Department Manager
